

FoliLED Garment Rail

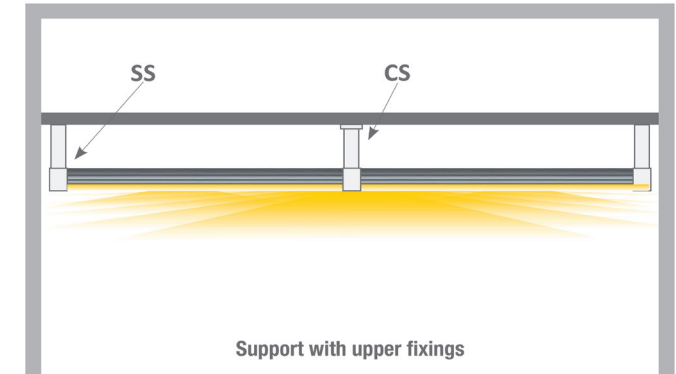

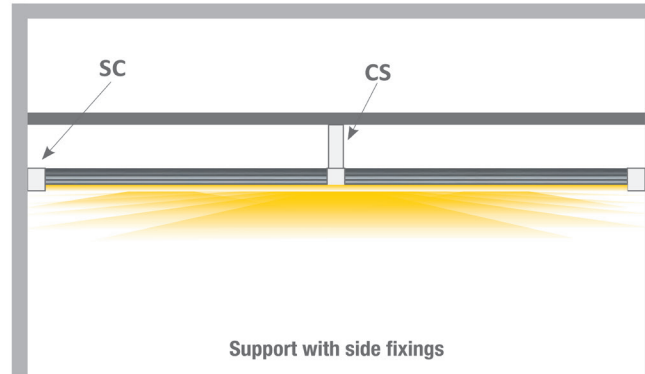

Garment Rail - GR

Our Garment Rail led profile is manufactured with high purity aluminium and available in anodized silver, lacquered white and raw aluminum.

This profile also has a wide range of applications, examples of which include ceiling suspended luminaires, luminaires for displaying paintings, floor or wall mounted luminaires, etc.

It can be used with led strips with a maximum width of 12.5 mm and a power not greater than 30 W/m. In order to obtain a more homogeneous illumination, while also making the dots invisible, we recommend use of our frosted diffusers.
